

## Gold Note

Italian company Gold Note is a complete audio manufacturing company; the brand makes everything from sources to loudspeakers in the affordable to attainable price levels, and in all cases it brings a profound sense of Italian style and elegance to its products.

Style only gets you so far, however, the products are underpinned by some extremely solid concepts and a lot of thinking outside the box. This is why Gold Note's phono

stages have a sophisticated display to show both cartridge loading and EQ curve, to better link the user to the right choice of EQ for each record.

The audio world can have something of an inverted snobbery to products that look as good as they sound. Gold Note makes products that sound as good as they look!
